

COMPARING THE PERFORMANCE VEHICLE  
KILOMETERS TRAVELED MODEL BY USING  
MULTIPLE LINEAR REGRESSION ANALYSIS WITH  
BACK-PROPAGATION LEARNING OF ARTIFICIAL  
NEURAL NETWORK

Mr. Krissada Namchimplee & Mr. Warut Sammar Presenter

# Presentation Outline

*SUST*

★ Introduction

★ Objectives

★ Method

★ Conclusion

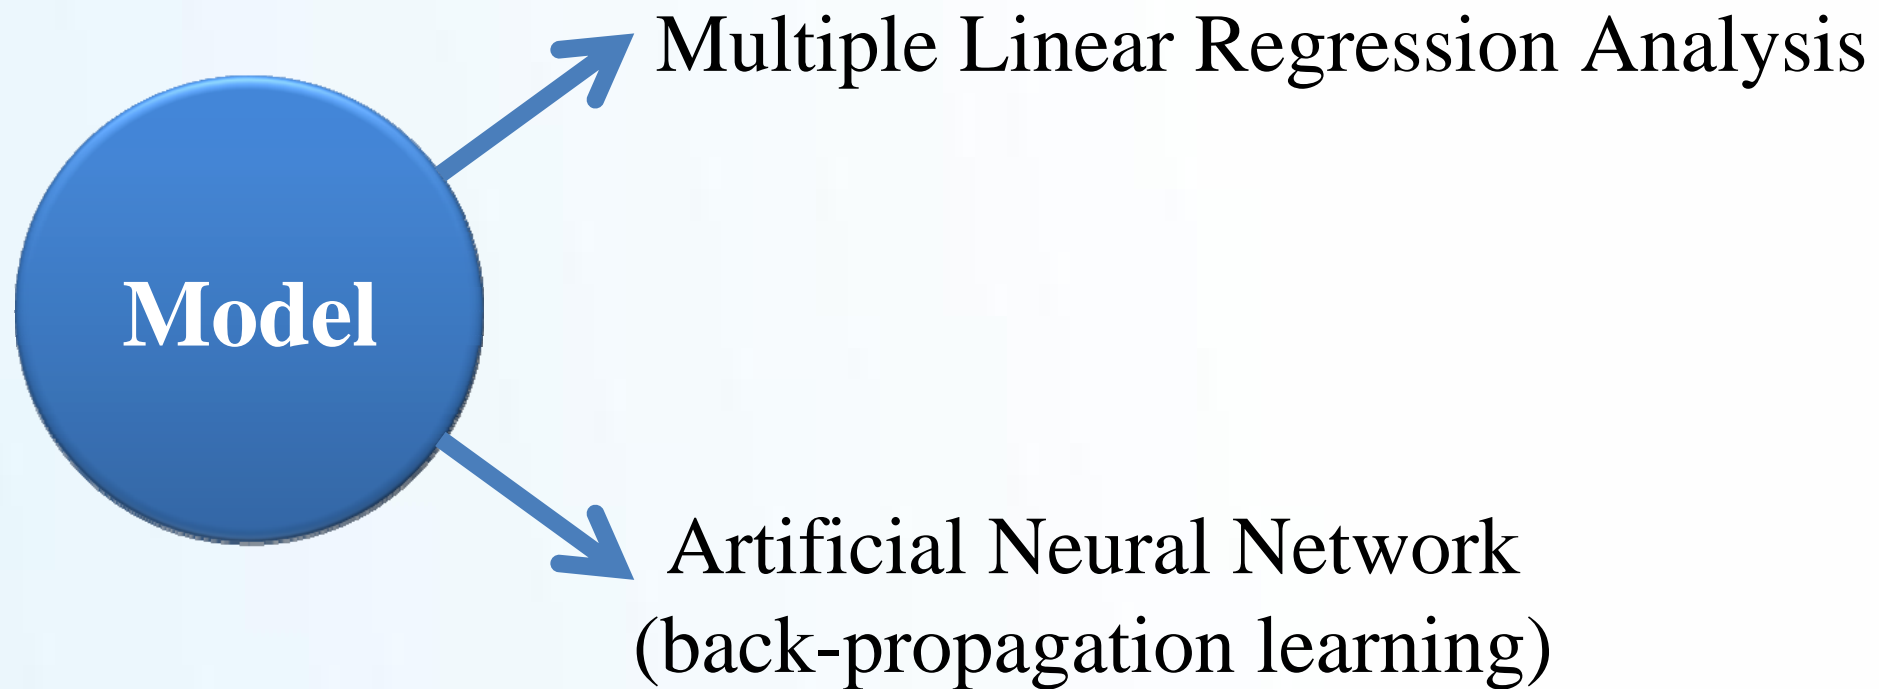

**This research is vehicle kilometers traveled model by using multiple linear regression analysis with back-propagation learning of artificial neural network**

# Objectives

*SUST*

- To explain the difference in the mean absolute percentage error (MAPE) which indicates the efficiency of prediction.
- To identify variables that affect vehicle kilometers traveled

A photograph of a road with a guardrail, viewed from a low angle, looking down the road. The road is paved and has a white dashed line on the right side. The guardrail is in the foreground, and the road curves to the right in the distance. The background shows a clear sky and some distant structures.

# MULTIPLE LINEAR REGRESSION ANALYSIS

# Model summary

SUST

Model	R Square	Adjusted R Square	Std. Error of the Estimate
1	0.176	0.162	10.189

# Regression Analysis Equation

SUST

$$Y=9.354-0.132X_1+0.032X_2+11.146X_3+5.830X_4+3.591X_5$$

$$\text{Adjust } R_a^2 = 0.162 \quad F = 12.539$$

Y = vehicle kilometers traveled     $X_3$  = inhabitant

$X_1$  = Age

$X_4$  = private employees

$X_2$  = Speed

$X_5$  = state enterprise

# ARTIFICIAL NEURAL NETWORK (ANN)

- massive parallel
- distributed data and computation
- learning
- generalization
- adaptation
- content-based processing
- fault tolerance

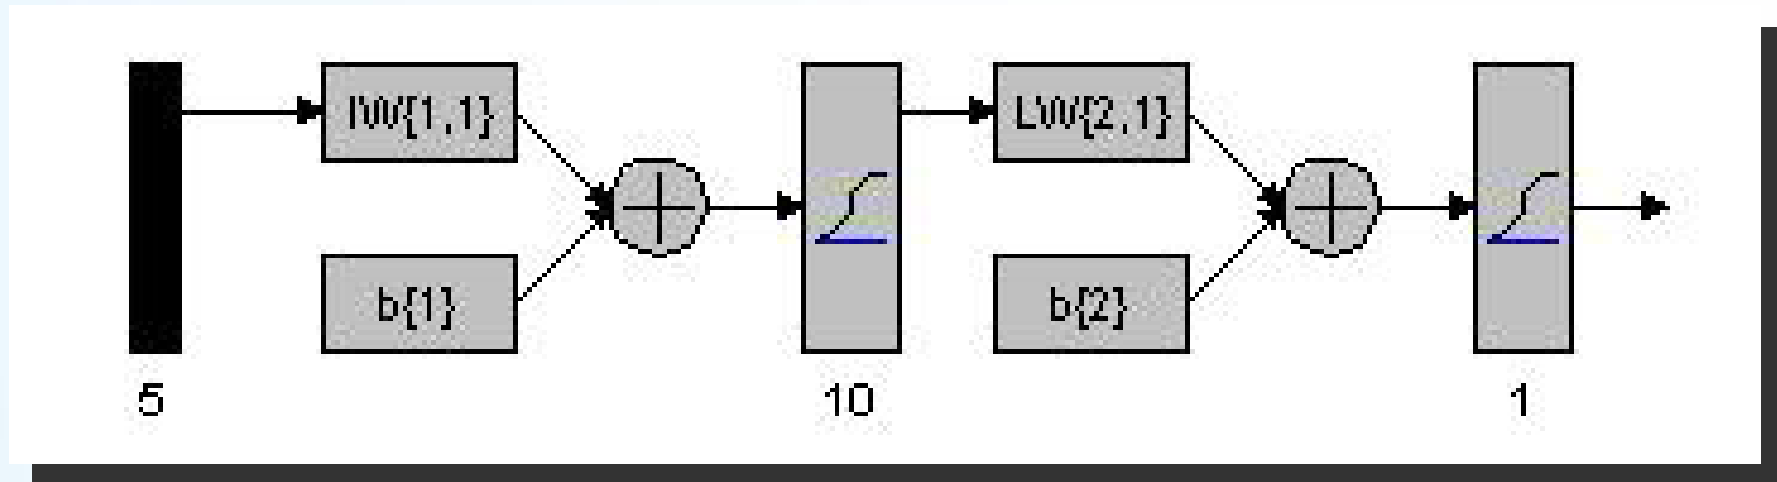

# ANN Processing

1 Neural

## Testing Performance vehicle kilometers traveled model by ANN

Mean Square Error  
at 250 Epochs

- How to multiple linear regression analysis is equal to 27.37%
- How to back-propagation learning of artificial neural network is equal to 24.64 %

From the mean absolute percentage error; MAPE showed that neural network method is effective in predicting a better model to multiple linear regression analysis.
